

LES Hydrophilic PES Cartridge Filter

High throughput microelectronic chemical and ultrapure water contamination control solution

LES series filter cartridges are made of native hydrophilic PES membrane and designed for ultrapure/DI water applications in the microelectronics industry. LES series filters are constructed of a highly asymmetric and hydrophilic PES pleated membrane with long service life, and superior particle retention, flow rate, and chemical compatibility. PES membrane filter cartridges are an ideal choice for microelectronic applications requiring contamination control materials that are reliable and have consistent and efficient filtration.

Note: These filters are not available for North America and Europe. Please reach out to our specialists for other product recommendation for your applications.
