

# Phosphitylating and Phosphorylating Agents

*Useful for the production of amidites for DNA and RNA nucleotide oligomers and in production of APIs*

As a leader in specialty chemicals and advanced materials for the microelectronics, life sciences, and other high-tech industries, we can accelerate your new product development efforts and manufacturing supply chain by providing critical materials at the appropriate scale, and within the communicated delivery schedule. Our portfolio of phosphitylating and phosphorylating agents is tailored to your manufacturing requirements and specifications to meet your high-quality customized needs.

These agents are used in the production of amidites for DNA and RNA nucleotide oligomers, or “oligonucleotides” and in the production of active pharmaceutical ingredients (APIs). They are also used in chemical manufacturing processes, including organic synthesis.

Our experienced R&D teams provide deep chemistry expertise in an innovative culture to deliver custom synthesis solutions that meet your proprietary development needs. With our extensive manufacturing capabilities, we can handle a range of projects from grams to metric ton quantities, through scale-up and full commercialization. We also provide chemical process development, piloting, and custom chemical manufacturing.
